2450 degrees Fahrenheit at 7 lbs.
Higher temps at higher pressures

TIME TO HEAT: First heat of the day: approx. 4 minutes
Normal heats (depending on shoe size):
2 1/2 - 3 1/2 minutes

It's about how you work...

Attitude. Satisfaction. Pride.

The PF-200 Pro-Forge reflects just that and delivers what today's farrier wants in a fire. Clean, fast heat that's easy to weld in.

Pro-Forge took for granted that you wanted high heat without sacrificing fuel efficiency. You needed bar stock ports, cast iron doors that don't warp and a hassle free ignition system. Now you've got it.

A NEW WAY TO HEAT IRON.

Life should be as simple as possible, so we've added innovative new features like **Twin Instachange Jets** that realign instantly after cleaning and hearth plates you can change right through the **front door**. Even our ceramic fiber liner is unique. Its **round design** and state-of-the-art manufacturing process ensure that it stays intact. Even over those bumpy roads.

Think about how you work. Pro-Forge did. And came up with a whole new way for you to get iron hot. Fast.
